Overview

Dr. Ming Gong earned her Ph.D. in Graphics and Visual Computing from the Institute of Computing Technology, Chinese Academy of Sciences in 2013. She joined Microsoft STCA after graduation, leading an agile team with 40+ engineers and scientist in Beijing and Suzhou to develop advanced AI technologies for **Bing Search, Copilot, Cross-Lingual QA, Knowledge Graph, Recommendation, and the Edge browser**. Her work on cross-lingual understanding earned two Microsoft MLADS Distinguished Contribution Awards. She also served as the head of Microsoft's "AI School" in the Greater China Region, planning and delivering training programs that attracted record-breaking participation for 8 consecutive years, making it the most influential AI training program in Microsoft Asia-Pacific RD Group (APRD).

Since February 2025, Dr. Gong has been Head of Machine Learning Engineering at Atlassian US, leading a full-stack and globally distributed team of 60+ engineers and MLEs on the **Knowledge AI** initiative, spanning **Jira Search, Knowledge Fundamentals, and GenAI Search Experiences**. She led the v-team to ship Jira Search V1 within two months, drove knowledge foundations now used across Atlassian products, and built a proof-of-concept Enterprise AI Search in under a month, now progressing toward launch.

In addition to her industry leadership, Dr. Gong has published over 50 papers (**8K+ citations** on Google Scholar) in top-tier journals and conferences and holds more than 20 technology patents worldwide.

Education & Employment

Atlassian US

Heads of ML Engineering. **Lead a full-stack and global team with 60+ SWEs and MLEs.** 2025-Present

Microsoft Search Technology Center Asia

Principal Scientist Manager. **Build an elite team of 40+ engineers and scientists from scratch.** 2019-2024

Microsoft Search Technology Center Asia

Senior Dev Manager on Bing Question Answering, Document Understanding and NLP research. 2018-2019

Microsoft Search Technology Center Asia

Senior Tech Lead on Bing Question Answering, Document Understanding and NLP research. 2016-2018

Microsoft Search Technology Center Asia

Software Engineer 2 in Bing Core Search team. 2013-2015

Institute of Computing Technology, Chinese Academy of Sciences

Ph.D. on Graphics and Visual Computing. 2008-2013

Work & Projects

Jira Search, Knowledge Fundamentals, and GenAI Search Experiences

Knowledge AI, Atlassian 2025/02-Present

- Motivation & Goal: Reinvent Atlassian's search product by integrating LLM capabilities with enterprise knowledge to deliver smarter, more personalized experiences.
- Responsibility: (1) Lead the rebuild of Jira search ranking stack and user experience to enhance quality and engagement (2) Drive enterprise knowledge fundamentals end-to-end, including knowledge management, serving, and discovery (3) Initiate and lead the development of an enterprise AI search product from the ground up to differentiate against competitors.
- Deliveries: (1) Shipped Jira Search V1 within two months of joining, announced at Team'25 (2) Delivered knowledge fundamentals adopted across multiple teams and org-wide products to enable smarter, personalized features (3) Built a POC for the Enterprise AI Search product in less than one month, now progressing toward product launch.

Copilot Search - Bing AI Search Vertical

Bing GenAI, Microsoft 2024/11-2025/02

- Motivation & Goal: provide multi-turn ai search experience on Bing by unifying Gen QnA, GenSerp and Magazine experiences and backend framework.
- Media report: [blog link](#)
- Responsibility: (1) design and implement multi-turn AI search experience on Bing as a full-page vertical (2) build up unified and scalable LLM generation pipelines (3) Fine-tune and evaluate SOTA SLMs and LLMs (including R1 distilled and reproduced models) for cost-effective serving
- Deliveries: (1) Copilot Search as a Bing AI Vertical was shipped in April 2025 (1 month before Google launch its search AI Mode) (2) Established LLM post-training and fine-tuning framework and built-up series of task-specific SLMs to boost generation quality with large margin, achieving less than 5s first-token-latency.

Generative SERP - Reinvent Bing SERP as AI Masterpieces

Bing GenAI, Microsoft

2023/09-2024/11

- Motivation & Goal: Traditional search requires users to issue multiple queries and discover useful information from 10-blue links by themselves which may take lots of efforts. With the power of Generative AI models, we will automatically understand users deep intents and sub-intents in one search, then summarize related web documents and integrate various answers into one comprehensive, coherent and compelling document, which provides users a one-stop manual for effective and efficient information gathering or task completion.
- Media report: [blog link](#)
- Accountability: (1) Drive the development of advanced prompting flow for high quality content generations (relevance, richness, usefulness, coherence, truthfulness i.e. reduce hallucination, etc.) (2) Drive the SLMs (small LLMs like Mistral) training and high volume online pipeline development for scale-out (3) Drive UX design and implementation on Mobile and also contribute to desktop.
- Deliveries: (1) E2E build and ship MVP from scratch and A/B flight with **1.0% query coverage and 0.2 WPSBS gains** (2) V2 content generation pipeline with SLMs is shipped which scales to **5-10% coverage**.

Generative Answers on Bing SERP Top or Right-rail Position

Bing WholePage, Microsoft

2023/03-Present

- Motivation & Goal: Traditional answers on Bing are mainly extracted from single web resources which may lack of sufficient information or have bias. With generative AI models, we could aggregate information across multiple sources and generate comprehensive/fair answers to meet users direct intents (show on top) or provide deep insights for exploration (show on right-rail).
- Accountability: (1) Drive generative answer qualities and triggering for both cached data and real-time generated data. (2) Drive the development of E2E pipeline (high agility, low latency, decent freshness) and engaging user experiences (streaming output, click through to Bing chat, etc.).
- Deliveries: shipped **8% query coverage on Bing global markets with +0.1 WPSBS gains, +1.5M chat DAU**.

Microsoft Copilot on Edge Browser

Bing ASK, Microsoft

2023/03-2023/06

- Motivation & Goal: To help users better browse the web, build document chat experience in Edge side bar using latest LLM technologies.
- Accountability: Drive and deliver the long document summarization and document chat capabilities based GPT models in Edge copilot and Windows copilot, including PDFs and longer-form websites, making it easier to consume dense online content.
- Media report: [link1](#), [link2](#), [link3](#)
- Deliveries: (1) **Support 1000+ pages long documents with 95%+ accuracy** (2) This feature was selected to demo in Microsoft Copilot announcement event in 2023 May with quite positive user feedbacks. (3) Shipped to Edge and Windows copilot with delightful user experience.

Knowledge Card for Entities

Bing ASK, Microsoft

2021-2023

- Motivation & Goal: To help users gain systematic and In-depth knowledge of entities (like people, organization, city, animal, etc), aggregate entity-related multi-modal information from various sources as one rich and appealing card shown on Bing.
- Media report: [blog link](#)
- Accountability: (1) Drive high quality content extraction (template + MRC DL models) or generation (LLMs) for entities. (2) Drive high agility pipeline development for scale-out and data refresh. (3) Co-drive the implementation of the appealing UX.
- Deliveries: (1) shipped knowledge card for **150M entities globally which covers 80% Bing traffic and 32.2M consumed DAU and achieved +0.5 WPSBS gains** (2) Knowledge card is certified as one of the WoW features on Bing (only dozens of features out of hundreds of answers passed certification)

Segment Entity Search and Recommendations

Bing ASK, Microsoft

2021-Present

- Motivation & Goal: To meet user's need to search for specific entities in deep segments, like recipe search, job search, movie search, we develop entity search and recommendation system based on user queries and interests.
- Accountability: (1) drive the development of the entity search system for various segments (target relevance and WPSBS). (2) drive the development of the recommendation system for entities (target user engaged DAU).
- Deliveries: (1) shipped recipe and job search answers on Bing which **beat Google on both relevance and WPSBS** (2) shipped movie recommendation answer which close the WPSBS gap with G (3) Recipe search answer is certified as one of WoW features on Bing.

NLU Platform (Orca) for Bing Answer Triggering

Bing ASK, Microsoft

2020-Present

- Motivation & Goal: To deeply understand user queries (including domain, intents, slots, topics, etc) is critical for the correct triggering of hundreds of answers on Bing. ORCA platform is designed to be one unified NLU pipeline to support the triggering requirements for all segment answers in all languages.
- Accountability: (1) Drive the development of the **unified NLU pipeline with universal models** for high quality query understanding (2) Support answer partner onboarding to ORCA by developing agile pipeline and tools, thus contributing to answer top metrics.
- Deliveries: (1) supported 95% answers (coverage $\geq 0.05\%$) to leverage ORCA for triggering and shipped to global markets (2) 60% onboarding answers closed triggering gap with G

Document Understanding for Edge Right-rail Pane Recommendation

Bing ASK, Microsoft

2021-2022

- Motivation & Goal: To assist users to consume web page content efficiently, we build right-rail pane on Edge browser as reading companion to recommend web page related content or trending content to users for their quickly digest or further exploration.
- Accountability: (1) Drive the development of contextual relevance features (like page topics, page QnA, related pages) by leveraging document understanding models (2) Drive the development of the trending queries and video features for zero input page. (3) Drive the development of the content streaming processing pipeline with decent agility and freshness.
- Deliveries: Shipped contextual features and zero input features on Edge browser which bring **2M Edge DAU and 1M Bing DAU**.

Question-and-Answer System and Models in Bing Global Regions

Bing Answers & Segment, Microsoft

2016-2022

- Motivation & Goal: QnA is a delightful feature on Bing.com. But due to the lack of training data, it is hard to scale to global languages in a cost efficient way.
- Media report: [link1](#), [link2](#), [link3](#)
- Accountability: Lead the team to develop universal approaches and **scale QnA from English only to 100+ languages and 200+ regions**.
- Deliveries: (1) Propose a systematic language scaling methodology to resolve the training data limitation challenge on low-resource languages [25, 34, 26, 30, 22]. Two works about language scaling won Distinguished Contribution Award of Microsoft MLADS conference twice. (2) Ship **10+ releases DNN techniques** to improve the core QnA relevance, which beat and replace legacy GBDT based ranker with 400+ handcrafted features for the first time and win WPSBS with Google. (3) Propose novel model compression techniques for heavy pre-trained model online serving [32, 27] which powered **the first BERT model released in Bing** (within 1 month of BERT's open source) with **3.0% coverage gains** and **5.0% precision gains** for QnA.

Selected Social Activities

AI School China for Microsoft Asia-Pacific R&D Group (APRD)

Microsoft China

2017-Present

- Overview: AI School China was officially founded in April 2017, targeting to cultivate AI talents for APRD and empower our employees to improve their AI skills, "turn AI dream to AI capability", thus accelerate the AI products landing and businesses growth.
- Accountability: (1) Drive the overall planning, design and promotion of all types of AI events to meet various learning needs. (2) Drive the smoothing execution of all events through collaboration with event owners to delivery high quality content and achieve good learning effects.
- Deliveries: (1) As the main driver of the operation team, successfully run AI School in APRD for **7 years** which has become **the most impactful AI learning program in APRD**. (2) Drive the development of 3 major events to meet various needs for AI learning, including course, lecture and seminar, which achieve increasing participants year over year (**10k participants**) and **1k honored graduates** (course/seminar require commitment with strict graduation criteria). (3) As the lead, build up a core committee team to develop high quality programs and ensure the efficient operation.

Invited Course for LinkedIn Global Talent Program

Microsoft China

2022.11-2023.02

- Overview: LinkedIn organized the program "Global Academy for Chinese programmers" and invited 5 experienced AI experts from both product and research groups to offer a series of courses in hot topics.
- Deliveries: Offered a cutting-edge technical course with 4 classes on "Intelligent Question-and-Answer System for Search Engine", which attracted **50 million impressions with 98% satisfaction rate**.

Invited Talk for InfoQ Global AI Conference

Microsoft China

2021.11

- Overview: InfoQ organized ÁICon Global Conference on Artificial Intelligence and Machine Learning and invited AI experts from industry to offer cutting-edge technical talks for 9 tracks.
- Deliveries: honored to be the representative from Microsoft China and offered a talk "Challenges and Approaches for Globalization of Bing Question-and-Answering System" with great feedback.
