Overview

Dr. Ming Gong earned her [Ph.D. in Graphics and Visual Computing](#) from the Chinese Academy of Sciences in 2013. Across a career spanning [Microsoft](#) and [Atlassian](#), she has a proven track record of scaling high-impact AI organizations. At Microsoft, she led an agile team of 40+ scientists and engineers to pioneer AI technologies for [Bing Search](#), [Copilot](#), [Knowledge Graphs](#) and [Edge Browser](#). Currently, as the [Head of Machine Learning Engineering at Atlassian](#), she directs a global, full-stack organization of 60+ MLEs and engineers, driving the [Knowledge AI](#) initiative to redefine intelligent collaboration across Jira and the broader Atlassian ecosystem.

Her leadership harmonizes deep technical expertise in [Search Relevance](#), [Intelligent Answers](#), [Agentic/RAG Systems](#), [Recommendation System](#), and [LLM Post-training/Fine-tuning](#) with extensive [End-to-end Full-stack Development](#) experience in AI products at scale. She is seasoned in managing cross-functional and cross-continental teams (US, Canada, and Asia), successfully moving complex AI features from incubation to global launch with focus on core quality, product growth and user adoption.

Beyond industrial impact, she published [50+ papers](#) in top-tier AI venues ([10K+ citations](#)) and holds [20+ global patents](#), demonstrating a sustained and significant research footprint in AI modeling and applications.

Education & Employment

Atlassian US

Heads of ML Engineering. [Lead a full-stack and global team with 60+ SWEs and MLEs.](#) 2025-Present

Microsoft Search Technology Center Asia

Principal Scientist Manager. [Build an elite team of 40+ engineers and scientists from scratch.](#) 2019-2024

Microsoft Search Technology Center Asia

Senior Dev Manager on Bing Question Answering, Document Understanding and NLP research. 2018-2019

Microsoft Search Technology Center Asia

Senior Tech Lead on Bing Question Answering, Document Understanding and NLP research. 2016-2018

Microsoft Search Technology Center Asia

Software Engineer 2 in Bing Core Search team. 2013-2015

Institute of Computing Technology, Chinese Academy of Sciences

Ph.D. on Graphics and Visual Computing. 2008-2013

Work & Projects

Jira Search/Agents, Knowledge Fundamentals, and GenAI Search Experiences

Knowledge AI, Atlassian 2025/02-Present

- Motivation & Goal: Reinvent Atlassian search and agentic products by integrating LLM capabilities with enterprise knowledge to deliver intelligent, personalized AI experiences at global scale.

- Responsibility: (1) Lead end-to-end strategy and execution for Atlassian search and agentic products, orchestrating LLMs, ranking, retrieval, reasoning, and UX. (2) Spearhead the overhaul of the Jira Search ranking stack and user experience to maximize relevance and engagement for global enterprise customers. (3) Architect and scale enterprise knowledge fundamentals (management and serving layers) to power search and discovery across the product suite. (4) Drive AI-led UX transformation by leveraging generative capabilities to transition from passive search to proactive, assistive user experiences.

- Deliveries: (1) Rebuilt **Jira search** ranking stack and shipped new Jira search experience to global customers within 8 months of joining, premiered at TeamEU'25, driving **3x growth in Search MAU**. (2) Accelerated sustained AI MAU **from 100k to 1.2M** via **generative search experiences** (Smart Answers, AI Definitions) and novel generative UI framework. (3) Built core **knowledge foundations** including collaboration graph, entity linking, people and team ranking, enabling smarter personalized features across Atlassian products. (4) Launched **Jira Agents** in Rovo Chat within 3 months, becoming a primary driver of Rovo adoption. (5) Pioneered AI-native team operation through building the **X-SuperAgent (first Atlassian compliant "OpenClaw" framework)**, boosting developer productivity by over 40%.

Copilot Search - Bing AI Search Vertical

Bing GenAI, Microsoft

2024/11-2025/02

- Motivation & Goal: Reimagine Bing search with a unified multi-turn AI experience by consolidating Gen QnA, Gen SERP, and Magazine surfaces into a single full-page Copilot Search vertical, supported by a scalable, production-grade GenAI backend framework.

- Media report: [blog link](#)

- Responsibility: (1) Architected and delivered Bing's multi-turn AI search experience as a first-class full-page vertical (2) Designed and implemented unified, scalable LLM generation and orchestration pipelines for search (3) Led post-training, fine-tuning, and evaluation of state-of-the-art SLMs and LLMs (including R1 distilled and reproduced models) to achieve cost-efficient, low-latency serving.

- Deliveries: (1) Successfully launched Copilot Search as a Bing AI Search Vertical in April 2025, preceding Google's Search AI Mode launch by one month (2) Established an end-to-end LLM post-training and fine-tuning framework and developed a portfolio of task-specialized SLMs, significantly improving generation quality while achieving sub-5s first-token latency in production.

Generative SERP - Reinvent Bing SERP as AI Masterpieces

Bing GenAI, Microsoft

2023/09-2024/11

- Motivation & Goal: Traditional search requires users to issue multiple queries and manually synthesize information from ten-blue links, resulting in fragmented and inefficient information discovery. Leveraging generative AI, this initiative reimagines Bing SERP to automatically understand users' deep intents and sub-intents within a single query, summarize relevant web content, and synthesize diverse answers into one comprehensive, coherent, and trustworthy AI-generated document—serving as a one-stop manual for effective information gathering and task completion.

- Media report: [blog link](#)

- Accountability: (1) Led the design and iteration of advanced prompting and generation workflows to ensure high-quality outputs across relevance, richness, usefulness, coherence, and truthfulness (hallucination reduction). (2) Drove training and deployment of small language models (SLMs, e.g., Mistral) and built high-throughput, scalable online generation pipelines. (3) Led end-to-end UX design and implementation for mobile experiences, with additional contributions to desktop and also contribute to desktop.

- Deliveries: (1) Built and shipped the end-to-end MVP from scratch, including A/B experimentation, achieving **1.0% query coverage and +0.2 WPSBS gains**. (2) Delivered V2 generation pipeline powered by SLMs, scaling coverage to **10% of queries** while maintaining production quality and latency targets.

Generative Answers on Bing SERP Top or Right-rail Position

Bing WholePage, Microsoft

2023/03-Present

- Motivation & Goal: Traditional answers on Bing are mainly extracted from single web resources which may lack of sufficient information or have bias. With generative AI models, we could aggregate information across multiple sources and generate comprehensive/fair answers to meet users direct intents (show on top) or provide deep insights for exploration (show on right-rail).

- Accountability: (1) Drive generative answer qualities and triggering for both cached data and real-time generated data. (2) Drive the development of E2E pipeline (high agility, low latency, decent freshness) and engaging user experiences (streaming output, click through to Bing chat, etc.).

- Deliveries: shipped **8% query coverage on Bing global markets with +0.1 WPSBS gains, +1.5M chat DAU**.

Microsoft Copilot on Edge Browser

Bing ASK, Microsoft

2023/03-2023/06

- Motivation & Goal: Enable users to browse and understand the web more effectively by building an AI-powered document chat experience in the Edge sidebar, leveraging the latest LLM technologies to make long-form and complex content easier to consume.

- Accountability: Led the design and delivery of long-document summarization and document chat capabilities powered by GPT models across Edge Copilot and Windows Copilot. Owned end-to-end support for PDFs and long-form websites, enabling users to interact with dense online content through natural language and conversational AI.

- Media report: [link1](#), [link2](#), [link3](#)

- Deliveries: (1) Delivered robust support for **1,000+ page documents with 95%+ accuracy** (2) Selected as a featured demo in the Microsoft Copilot announcement event (May 2023), receiving strong positive user feedback (3) Successfully shipped to Edge Copilot and Windows Copilot with a polished, user-centric experience.

Knowledge Card for Entities

Bing ASK, Microsoft

2021-2023

- Motivation & Goal: Enable users to gain systematic, in-depth understanding of real-world entities (e.g., people, organizations, cities, animals) by aggregating entity-centric multi-modal information from diverse sources into a single rich, engaging Knowledge Card experience on Bing.
- Media report: [blog link](#)
- Accountability: (1) Led high-quality entity content extraction and generation using hybrid approaches (template-based systems, MRC deep learning models, and LLMs) (2) Drove development of highly agile, scalable pipelines to support global scale-out and frequent data refresh (3) Co-led the design and implementation of a visually compelling, user-centric Knowledge Card UX.
- Deliveries: (1) Shipped Knowledge Cards for **150M entities globally**, covering **80% of Bing traffic**, serving **32.2M DAU**, and delivering **+0.5 WPSBS gains** (2) Knowledge Cards certified as one of Bing's WoW features (only dozens selected from hundreds of answer experiences).

Segment Entity Search and Recommendations

Bing ASK, Microsoft

2021-Present

- Motivation & Goal: Address users' needs for deep, segment-specific entity search (e.g., recipes, jobs, movies) by building scalable entity search and recommendation systems grounded in user queries and interests.
- Accountability: (1) Led development of segment entity search systems with a focus on relevance and WPSBS (2) Drove entity recommendation systems to improve user engagement and DAU.
- Deliveries: (1) shipped recipe and job search answers on Bing which **beat Google on both relevance and WPSBS** (2) shipped movie recommendation answer which close the WPSBS gap with G (3) Recipe search answer is certified as one of WoW features on Bing.

NLU Platform (Orca) for Bing Answer Triggering

Bing ASK, Microsoft

2020-Present

- Motivation & Goal: To deeply understand user queries (including domain, intents, slots, topics, etc) is critical for the correct triggering of hundreds of answers on Bing. ORCA platform is designed to be one unified NLU pipeline to support the triggering requirements for all segment answers in all languages.
- Accountability: (1) Drive the development of the **unified NLU pipeline with universal models** for high quality query understanding (2) Support answer partner onboarding to ORCA by developing agile pipeline and tools, thus contributing to answer top metrics.
- Deliveries: (1) supported 95% answers (coverage $\geq 0.05\%$) to leverage ORCA for triggering and shipped to global markets (2) 60% onboarding answers closed triggering gap with G

Document Understanding for Edge Right-rail Pane Recommendation

Bing ASK, Microsoft

2021-2022

- Motivation & Goal: To assist users to consume web page content efficiently, we build right-rail pane on Edge browser as reading companion to recommend web page related content or trending content to users for their quickly digest or further exploration.
- Accountability: (1) Drive the development of contextual relevance features (like page topics, page QnA, related pages) by leveraging document understanding models (2) Drive the development of the trending queries and video features for zero input page. (3) Drive the development of the content streaming processing pipeline with decent agility and freshness.
- Deliveries: Shipped contextual features and zero input features on Edge browser which bring **2M Edge DAU and 1M Bing DAU**.

Question-and-Answer System and Models in Bing Global Regions

Bing Answers & Segment, Microsoft

2016-2022

- Motivation & Goal: QnA is a delightful feature on Bing.com. But due to the lack of training data, it is hard to scale to global languages in a cost efficient way.
- Media report: [link1](#), [link2](#), [link3](#)
- Accountability: Lead the team to develop universal approaches and **scale QnA from English only to 100+ languages and 200+ regions**.
- Deliveries: (1) Propose a systematic language scaling methodology to resolve the training data limitation challenge on low-resource languages [26, 33, 27, 30, 22]. Two works about language scaling won Distinguished Contribution Award of Microsoft MLADS conference twice. (2) Ship **10+ releases DNN techniques** to improve the core QnA relevance, which beat and replace legacy GBDT based ranker with 400+ handcrafted features for the first time and win WPSBS with Google. (3) Propose novel model compression techniques for heavy pre-trained model online serving [32, 28] which powered **the first BERT model released in Bing** (within 1 month of BERT's open source) with **3.0% coverage gains** and **5.0% precision gains** for QnA.

Selected Social Activities

AI School China for Microsoft Asia-Pacific R&D Group (APRD)

Microsoft China

2017-2025

- Overview: AI School China was officially founded in April 2017, targeting to cultivate AI talents for APRD and empower our employees to improve their AI skills, "turn AI dream to AI capability", thus accelerate the AI products landing and businesses growth.
- Accountability: (1) Drive the overall planning, design and promotion of all types of AI events to meet various learning needs. (2) Drive the smoothing execution of all events through collaboration with event owners to delivery high quality content and achieve good learning effects.
- Deliveries: (1) As the main driver of the operation team, successfully run AI School in APRD for **8 years** which has become **the most impactful AI learning program in APRD**. (2) Drive the development of 3 major events to meet various needs for AI learning, including course, lecture and seminar, which achieve increasing participants year over year (**10k participants**) and **1k honored graduates** (course/seminar require commitment with strict graduation criteria). (3) As the lead, build up a core committee team to develop high quality programs and ensure the efficient operation.

Invited Course for LinkedIn Global Talent Program

Microsoft China

2022.11-2023.02

- Overview: LinkedIn organized the program "Global Academy for Chinese programmers" and invited 5 experienced AI experts from both product and research groups to offer a series of courses in hot topics.
- Deliveries: Offered a cutting-edge technical course with 4 classes on "Intelligent Question-and-Answer System for Search Engine", which attracted **50 million impressions with 98% satisfaction rate**.

Invited Talk for InfoQ Global AI Conference

Microsoft China

2021.11

- Overview: InfoQ organized ÁICon Global Conference on Artificial Intelligence and Machine Learning and invited AI experts from industry to offer cutting-edge technical talks for 9 tracks.
- Deliveries: honored to be the representative from Microsoft China and offered a talk "Challenges and Approaches for Globalization of Bing Question-and-Answering System" with great feedback.

Selected Awards

- **Best Paper Award**, AI4Research 2024, IJCAI'24. Paper Title: Step-Back Profiling: Distilling User History for Personalized Scientific Writing.
- 2021 Fall Microsoft Global Machine Learning, AI & Data Science Conference (MLADS) **Distinguished Contribution Award (2/250+)**. **Break conference history to receive the award twice consecutively**.
- 2021 Spring Microsoft Global Machine Learning, AI & Data Science Conference (MLADS) Distinguished Contribution Award (2/300+).
- 2023 Microsoft Global Hackathon - Edge Theatre, **Hack for Web Experiences - Best Overall Hack**.
- 2023 Microsoft Global Hackathon - Edge Theatre, **Greater China Region - Beijing - Most Popular Hack**.
- 2023 Microsoft Global Hackathon, WebXT China - DeKG: Build World's Largest Decentralized Knowledge Ecosystem, **Hack for Web Experiences - Best Innovativeness Originality Hack**.
- 2023 Microsoft Global Hackathon, WebXT China - DeKG: Build World's Largest Decentralized Knowledge Ecosystem, **Greater China Region - Beijing - Outstanding Project Award**.
- Excellent Operation Award of AI School China. 2018, 2019, 2020, 2021, 2022, 2023.
- Microsoft AI Core Q3 FY18 Greatness Award. 2018.
